Journal publishers are also involved in other activities such as advertising and public relations, and some publish their own periodicals.

Publishers are usually the main source of information about publishing, but it is often difficult to obtain independent information from other publishing houses, and it may be best to consult:

• Booksellers or book clubs

• Authors' associations, journalists' unions

• Booksellers' associations

• Authors' agents and literary agencies

• National Council of Publishers, American Booksellers Association

• Book reviews in newspapers and magazines

• Booksellers' publications

• Booksellers' trade publications

• Authors

• Authors' associations and organizations

...which is associated to the class of bounded superconformal representations of the Virasoro algebra.

It does not appear to be clearly discernible that the two events do
not in fact represent a single event or a sequence of events on a photo
recorder.

Other contributions testing

Other individuals have suggested various possibilities about the nature of
the phenomenon reported which have been eliminated from further
consideration. These are:

The two events represent separate events.

Two events which occurred sequentially, one being a reflection of the other.
The second event being reflected in the first event. This is a possibility
but it is considered unlikely.

The two events are interpreted as being coincident events. However
this is not supported by the evidence.

Conclusions drawn

From the above, and the other possibilities which have been
eliminated, the following conclusions are drawn:

The two events represent a single event.

The two events occurred sequentially, the second event being a reflection
of the first event.

Two events which occurred simultaneously, the second event appearing
as a reflection of the first.

The two events are interpreted as being coincident events.

However no conclusions can be drawn.
